Pallet Rack

Regular Duty and Heavy Duty pallet rack features 3" x 3" columns and 5" x 8" seismic base plates. Regular duty uprights are constructed of 16 gauge steel and provide 16,100 lbs. capacity per upright. The heavy duty uprights feature a 23,300 lbs. capacity and are constructed from 14 gauge steel (regular and heavy duty capacities are based upon a maximum shelf spacing of 36").

The bolt together design of the pallet rack uprights provides a lower cost of ownership because components can be easily replaced when damaged during use. Traditional welded uprights would require replacement of the entire upright at a more significant cost. Step Load Beams feature a removable safety clip that allows for easy replacement of damaged clips. Racks are designed for use with a forklift (or other hydraulic or electrical lift) or for heavy duty hand stacking. Buy pallet rack uprights, beams, wire mesh decking and accessories separately or in complete "starter" and "add-on" units.

Popular tear drop design insures interchangeability with most major pallet rack manufacturers: Interlake (Original Style), Space Rack, USP, Lodi Metal-Tech, Steek King and Husky.

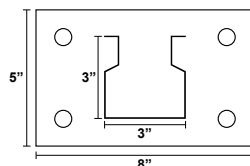

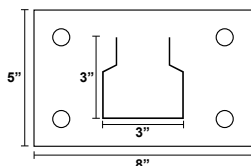

Uprights

Featuring a 3" x 3" standard column design and 5" x 8" base plate. Regular duty uprights are constructed of 16 gauge steel with a 16,100 lbs. capacity. Heavy duty uprights feature 14 gauge steel construction with a capacity of 23,300 lbs. (regular and heavy duty capacities based upon 36" maximum shelf spacing). Uprights utilize a bolt together design for easy component replacement. Beams can be adjusted every 2". Uprights can be shipped assembled for an additional charge per upright. Color: Light green.

Step Load Beams

Deluxe form beams feature an improved safety clip which can be easily replaced and prevents the beam from detaching from the upright. Beams are interchangeable with most major pallet rack manufacturers. Beam length is measured by clear span between uprights. Beam capacities are based on an evenly distributed load. Sold per beam. Two beams are required to create a shelf. Color:

How to Order

Uprights

1. Upright Capacity

Calculate upright capacity by adding total weight of goods being stored. Do not include goods being placed on floor.

2. Upright Height

Step #1 - Calculate load height by adding height of palletized goods plus 6" for clearance between palletized goods and the beam supporting the next level.

Step #2 - Add height of beam (either 3.5", 4", 5" or 6")

Step #3 - Multiply the sum of Step #1 and Step #2 by the number of load levels.

Note: Top load height need not be counted in determining upright height.

3. Upright Depth

Deduct 6" from pallet depth to allow 3" pallet overhang front and rear. For example: a 48" deep pallet would require a 42" deep upright.

Load Beams

1. Beam Length

Multiply pallet width by the number of pallets being stored on each level plus 12" for clearance. For example: two 48" wide pallets would require 108" long beams.

2. Beam Capacity

Determine capacity by multiplying the number of pallets per pair of load beams by the weight of each pallet.
